Requirements for Bachelors / Masters

- Attending the introductory session
- Attending the seminar days
- Holding a seminar talk (30 minutes, with plenary discussion)
 - The presentation counts towards 50% of your final grade
- Writing a 4 / 6 page seminar paper
 - The paper counts towards the other 50% of your grade
- Discussion with your advisor of: talk outline & slides, paper draft
 - Mandatory!
 - Keep the deadlines in mind (next slide)

Dates and Deadlines

Task / Event	Date
Introductory Session	Oct. 17 th
Registration for topics by e-mail	Oct. 24 th
Session on how to give a good seminar talk (optional)	Nov. 8 th
Session on scientific paper writing (optional)	Dec. 13 th
Discussion of talk outline with advisor	before Dec 7 th
Discussion of slides with advisor	before Dec. 21 st
2 Seminar days	between Jan. 7 th – 17 th
Discussion of paper draft with advisor	before Feb. 1 st
Finished seminar paper	Feb. 7 th

About the seminar talk

- 30 minutes, including discussion of your topic
Language for the talk is English
 - Keep it correct and informative but comprehensible
 - Getting everyone to understand is important
 - Don't turn your slides into collections of equations and figures
 - You can go into more detail in your seminar paper
 - Style and visuals of the slides are up to you
- Visit the optional session on giving a good seminar talk!

About the seminar paper

- Four pages for Bachelor students, six for Master students, in German or English
- In the style of a scientific publication
 - Factual, neutral and objective discussion of your topic
 - Scientific language and precise statements
 - Proper use of citations from credible sources
 - Conforming to a standard layout template from the scientific community (see seminar webpage)

JOURNAL OF L^AT_EX CLASS FILES, VOL. 8, NO. 1, NOVEMBER 2012

How to Use the IEEEtran LaTeX Class

Michael Shell, *Member, IEEE*^{*}
(Invited Paper)

Abstract—This article describes how to use the IEEEtran class with LaTeX to produce high quality typeset papers that are suitable for submission to the Institute of Electrical and Electronics Engineers (IEEE). IEEEtran can produce conference, journal and technical note (correspondence) papers with a suitable choice of class options. This document was produced using IEEEtran in journal mode.

Index Terms—Class, IEEEtran, L^AT_EX, paper, style, template, typesetting.

I. INTRODUCTION

WITH a recent IEEEtran class file, a computer running L^AT_EX, and a basic understanding of the L^AT_EX language, an author can produce professional quality typeset research papers very quickly, inexpensively, and with minimal effort. The purpose of this article is to serve as a user guide of IEEEtran L^AT_EX class and to document its unique features and behavior.

This document applies to version 1.7 and later of IEEEtran. Prior versions do not have all of the features described here. IEEEtran will display the version number on the user's console when a document using it is being compiled. The latest version of IEEEtran and its support files can be obtained from IEEE's web site [1], or CTAN [2]. This latter site may have some additional material, such as beta test versions and files related to non-IEEE users of IEEEtran. See the IEEEtran homepage [3] for frequently asked questions and recent news about IEEEtran.

It is assumed that the reader has at least a basic working knowledge of L^AT_EX. Those so lacking are strongly encouraged to read some of the excellent literature on the subject [4]–[6]. General support for L^AT_EX related questions can be obtained in the internet newsgroup comp.tex.tex. There is also a searchable list of frequently asked questions about L^AT_EX [7].

Please note that the appendices sections contain information on installing the IEEEtran class file as well as tips on how to avoid commonly made mistakes.

II. CLASS OPTIONS

There are a number of class options that can be used to control the overall mode and behavior of IEEEtran. These are specified in the traditional L^AT_EX way. For example,

```
\documentclass[9pt,technote]{IEEEtran}
```

is used with correspondence (technote) papers. The various categories of options will now be discussed. For each category, the default option is shown in bold. The user must specify an option from each category in which the default is not the one desired. The various categories are totally orthogonal to each other—changes in one will not affect the defaults in the others.

A. **9pt**, **10pt**, **11pt**, **12pt**

There are four possible values for the normal text size.

→ Visit the optional session on scientific paper writing!

Next steps

- Choose a topic!
 - Topic areas will be introduced now
 - Choose at least two areas, write to topic advisor if you have questions about the topic area
 - E-mail your topic choices to seminar organizer (kothmayr@in.tum.de) before Oct. 24th
- Finding dates for the seminar days
 - You'll receive an e-mail with a voting link
 - Mark the dates when you're available
 - Don't cherry-pick!
